- Check the timer control: Faulty timers can prevent the spin cycle from starting; test with a multimeter.

3. The Washer Leaks Water

Diagnostic Steps:

- Inspect door seals or tub seals: Look for tears, cracks, or buildup that can cause leaks.
- Check drain hose connections: Tighten fittings and clear blockages.
- Verify water level: Overfilling can cause leaks; adjust fill levels if adjustable.
- Test the water inlet valve: A damaged valve may leak internally; replace if needed.

4. Excess Noise During Operation

Diagnostic Steps:

- Examine the drum bearings: Worn bearings produce grinding sounds; replace if necessary.
- Check for foreign objects: Coins or debris can be caught in the agitator or pump.
- Inspect the suspension components: Worn shocks or supports can cause banging.
- Assess the drum and motor alignment: Misalignment can lead to unusual noises.
