Question 1: Solving Quadratic Equations

Given: $(2x^2 - 5x - 3 = 0)$

Requirement: Find the roots of the equation.

Analysis:

- Recognize that the quadratic can be solved using the quadratic formula:

$$(x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a})$$

- Substitute $(a=2)$, $(b=-5)$, $(c=-3)$:

$$(x = \frac{5 \pm \sqrt{(-5)^2 - 4 \times 2 \times (-3)}}{2 \times 2})$$

$$(x = \frac{5 \pm \sqrt{25 + 24}}{4})$$

$$\left(x = \frac{5 \pm \sqrt{49}}{4} \right)$$

$$\left(x = \frac{5 \pm 7}{4} \right)$$

- Roots are:

$$\left(x = \frac{5 + 7}{4} = 3 \right)$$

$$\left(x = \frac{5 - 7}{4} = -\frac{1}{2} \right)$$

Key takeaway: Be comfortable with the quadratic formula, and always check the discriminant to determine the nature of roots.

Question 2: Geometry ? Angles in Cyclic Quadrilaterals

Given: A cyclic quadrilateral ABCD with angle $ABC = 70^\circ$, find the measure of angle ADC.

Analysis:

- Recall that in a cyclic quadrilateral, the opposite angles sum to 180° .
- Since ABCD is cyclic:

$$\left(\angle ABC + \angle ADC = 180^\circ \right)$$

- Therefore,

$$\left(\angle ADC = 180^\circ - 70^\circ = 110^\circ \right)$$

Key takeaway: Understanding properties of cyclic quadrilaterals simplifies such questions significantly.

Question 3: Mensuration ? Volume of a Cone

Given: Radius $(r = 3)$ cm, height $(h = 4)$ cm. Find the volume of the cone.

Solution:

- Use the volume formula:

$$V = \frac{1}{3} \pi r^2 h$$

- Substitute:

$$V = \frac{1}{3} \times \pi \times 3^2 \times 4$$

$$V = \frac{1}{3} \times \pi \times 9 \times 4$$

$$V = \frac{1}{3} \times \pi \times 36$$

$$V = 12\pi \text{ cm}^3$$

- Approximate:

$$V \approx 12 \times 3.1416 \approx 37.7 \text{ cm}^3$$

Key takeaway: Memorize standard formulas and practice unit conversions.
